Substances for which toxic substance reduction plans have been prepared:

Substance Name	CAS #	Date
Chromium (and its compounds)	NA-04	September 10, 2014
Nickel (and its compounds)	NA-11	September 10, 2014

Objectives

DCL does not intend to reduce the use of Chromium and Nickel at this time. Chromium and Nickel are used in several types of steel, welding wire and electrodes. DCL-Millway is committed to ensure that Chromium and Nickel are used in a responsible and efficient manner. Chromium and Nickel are created at the facility as a combustion by-product in negligible quantity.

Toxic Reduction Progress

The current reporting year saw increases for chromium and nickel primarily due to decrease in the facility's production in 2018 for several materials and material reformation.

Plan Implementation Progress

There were no reduction options identified in any of the plans for the above noted substances that were identified as being both technically and economically feasible. No additional actions outside the plans were taken in 2018 to reduce the use and/or creation for any of the reportable substances. No amendments were made to the toxic substances' reduction plans in 2018.
